DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

The primary reasons for allowance of claims 1 in the instant application is that the combination of Pestoni, Akishita, Sims and Matsuyama do not teach "A method for delivering multimedia content on a physical media, comprising: placing at least one media key block on the physical media; dividing the multimedia content on the physical media into multiple parts; randomly selecting content keys corresponding to each part of the multimedia content; encrypting the parts of the multimedia content with corresponding content keys; selecting a media key block from a set of media key blocks; encrypting the corresponding content keys with the media key block; and delivering the encrypted corresponding content keys to a player of the physical media, wherein a subset of the encrypted corresponding content keys are embedded on the physical media, and wherein at least one of the encrypted corresponding content keys not in the subset are distributed using a web service provider and are not embedded on the physical media; wherein the physical media includes a physical media unique key encrypted in each of the content keys such that (a) a media key obtained from the media key block is combined with a volume identifier (ID) for the physical media using a cryptographic hash to provide the physical media unique key, and the physical media unique key is then encrypted in each of the corresponding content keys; or (b) wherein the physical media unique key is the media key; and wherein at least one of the

encrypted content keys embedded on the physical media comprises a deferred key, in that content associated with the deferred key may be played without contacting the web service provider, thereby establishing a credit transaction with respect to the viewing of the content associated with the deferred key.”

Claims 2-8 are dependent on Claim 1 and are allowable for at least the same reasons.
